

I am writing to support XM Radio in regards to their excellent programming. Please don't take away the ability for consumers to choose where they get their entertainment and information. The programming on XM is excellent, and the localized traffic and weather are extremely well done and helpful. I would even go as far to suggest that they be allowed to insert local content via their repeater network. It's clear to me that Clearchannel and others have no interest in true localized content, they only seek to maintain their monopoly. Please reject the NAB petition #04-160.
